

PHISHING AWARENESS MODULE

Learn how to identify, prevent, and report phishing attacks

Prepared by:

FRIMPONG TRACY KWAKYEWAA KUMI

Learning Objectives

By the end of the module , you will be able to:

- ✓ Define phishing attacks
- ✓ Identify common phishing methods
- ✓ Recognize warning signs
- ✓ Apply prevention techniques
- ✓ Report suspicious activities

What is Phishing

Phishing is a cyberattack in which criminals impersonate trusted individuals or organizations to trick users into revealing sensitive information.

Examples:

- Password
- Bank details
- Personal information

Email Phishing

Fraudulent emails pretending to come from trusted organizations.

Spear Phishing

Personalized attacks targeting specific individuals

Smishing

Fake SMS message requesting urgent action

Vishing

Phone calls pretending to be legitimate organization

The attacker creates a convincing fake message. Once the victim clicks a malicious link or attachment, sensitive information may be stolen or malware installed.

Warning Signs of Phishing

Urgent language

Unknown sender

Poor spelling and grammar

Suspicious links

Unexpected attachments

Request for password

Remember:
If something feels suspicious, verify it before clicking.
